The White Run Regional Municipal Authority is providing this newsletter to inform and remind customers in our service area of some important information with regards to the sanitary sewer system.

WRRMA Rules and Regulations Article IV, Section 4:15 **does not** allow a basement sump pump to be connected or discharging into the sanitary sewer system.

WRRMA services and maintains the Main Line. Homeowners are responsible for the sewer line from the house to the Main Line. The WRRMA personnel perform yearly maintenance to inspect, clean and make repairs to the Main Line.

A permit or permit wavier is required for outside construction projects: decks, garages, additions, driveways, sheds, fencing etc. Contact the WRRMA office before you dig.

Please do not dispose the following waste items in the sanitary sewer system: feminine napkins, tampons, (**even products which are advertised as being flushable**), condoms, diapers, under garments, razor blades, dental floss, medications, **wipes of any kind**, rags, plastic, cigarettes, cooking oil, grease or chemicals. These waste materials should be disposed as solid refuse and placed in trash containers. These items can cause massive damage to the sewer system, costing hundreds even thousands of dollars!

Your cooperation in these matters will be appreciated by the WRRMA personnel.

Thank You
